

### **Universe Below**

Close your eyes and imagine.  
Gaze spaceward through Hubble lenses.  
Savor colors and fractal patterns.  
Redirect your mind to embrace  
an algae bloom drifting on  
the tide over a coral reef.  
Compress both images into one.  
Enjoy the sum of the voyage.

### **Quantum Possibilities**

Open your mind to the possibility  
of imagining a new vision,  
a vision that brings light  
and forms which create images  
shaped by an abundant universe,  
alchemy formed by the Maker's will,  
revealing itself in deep space  
and deployed in the sea.

### **Into The Abyss**

Space probe rockets into the universe.  
Submarine descends toward the darkness.  
Let your mind travel both  
voyages simultaneously while enjoying  
Master's patterns of creative chaos.  
Fractal forms and colors shared  
in both dimensions, heaven made.  
Enjoy beauty above and below.

### **Enigma of Darkness**

Do you fear the unseen,  
those forms lurking in the shadows?  
Or, do you imagine possibility  
that alchemy of creation supports  
your every need and desire?  
Viewing heaven bound images, glowing,  
or examining a man-o-war tentacle.  
View God's plan in both.

### **Fill The Spaces**

Look through telescope or microscope.  
Study universe and algae bloom.  
Feel the similarity of creation.  
Patterns of Chaos divinely given,  
emerging and declining, life changing.

Colors, shapes ebb and flow.  
Fill the spaces between atoms  
with your consciousness, spirit filled.

### **Star Birth**

Star birth forms from Nebula  
light years from planet Earth.  
Central gravitational pull creates orbit  
as celestial bodies silently soar.  
As above, birth takes place  
below the surface of sea.  
Plankton burst forth from froth.  
Universal abundance excites the imagination.

### **Just A Moment**

A star is galactically born  
as another approaches silent death.  
Life forms from sea's abundance.  
Light beams disappear into depths.  
Critters never seen or heard  
burst to life at sea.  
Predators lurk, sensing their presence.  
Life may be very brief.

### **Everywhere We Look**

Most distant to naked eye,  
Andromeda Galaxy penetrates deep space.  
Light at center gathers energy  
as wisps at periphery struggle  
to maintain their tentative connections.  
Likewise, coral reef bursts forth,  
spewing larvae on strong current.  
Life scatters, survival only objective.

### **Of Creation**

Light disperses in dark space  
and filters through briny deep.  
Mysteries of creation surround us.  
Atomic nature of the universe takes  
many directions as life begins  
and ends, sometimes in violence.  
At times, lonely and silently.  
Mystery found in dying breath.

### **Space Between, Life In Relationship**

Tension and compression exists within  
the spaces between God's creations.  
Let your intuition touch surfaces.  
Feel the textures outside, in.  
Allow your imagination to enter.  
Sense the resistance from society,  
conditioning our responses, culture conforming.  
Belong to universe, as Epiphany.
